364-7383

1 ---UPON RESUMING AT 2:05 P.M., NOVEMBER 18, 1963

2 THE CHAIRMAN: First of all we are  
3 going to hear from Mr. R. J. King, who is Manager of  
4 the Mortgage Department of the Chartered Trust Company.  
5 I believe Mr. King has prepared a brief which has been  
6 distributed to each of the members. Is that correct?  
7 If you wish to make any preliminary remarks, Mr. King,  
8 by all means do so, or if you want to read your brief --  
9 whichever you prefer.

10 MR. KING: Well, Mr. Price, this is  
11 not exactly a brief. It's a letter I wrote in reply to  
12 a letter I had from your Committee asking the cost of  
13 borrowing with respect to mortgages from the Chartered  
14 Trust Company or from a lending institution. This is  
15 the letter I sent back to you.

16 "The Chartered Trust Company is in the  
17 mortgage lending field in both N.H.A. and conventional  
18 first mortgages. The N.H.A. rate is of course, estab-  
19 lished by the Central Mortgage and Housing Corporation  
20 but the conventional rate fluctuates due to availability  
21 of mortgage money in the market and local competition.  
22 The money we place in mortgages is obtained from the  
23 sale of Investment Certificates and deposits. During  
24 the past 10 year period conventional mortgage rates  
25 have fluctuated between  $4\frac{1}{2}\%$  and  $7\frac{1}{2}\%$  on residential  
26 properties and as high as 8% on some industrial and  
27 commercial loans. Interest is calculated on the out-  
28 standing monthly balance payable at 6 month intervals  
29 not in advance.

30 "We make mortgage loans on improved

1 real estate up to a maximum of 66-2/3% of appraised  
2 value on loans made for Company and Estate funds. We  
3 have not entered -- Chartered Trust has not entered --  
4 into any arrangement to make 80% loans in a general way  
5 but we have an agency agreement with Aluminum Company of  
6 Canada to make first mortgage loans up to 80% of value  
7 on Alcan Homes. On these loans we advance 66-2/3%  
8 of value and Alcan advances 13-1/3% making an 80% loan.  
9 These loans are made at  $\frac{1}{4}$  of 1% above the prime resi-  
10 dential interest rate and are all on a 25 year term and  
11 amortization basis.

12 "The costs to the mortgagor in obtain-  
13 ing a mortgage include supplying us with a Survey, our  
14 appraisal fee and legal costs in accordance with the  
15 tariff of the local County or District Law Association.  
16 Our appraisal fees are based on \$2.00 per thousand of  
17 the amount of the loan but the scale may be reduced on  
18 larger loans. All finder's fees (introductory commis-  
19 sions, that is) and cost of Credit Reports are borne by  
20 Chartered Trust Company."

21 THE CHAIRMAN: Would you add anything  
22 to that? Do you wish to add anything to your letter?

23 MR. KING: No, sir, there is nothing  
24 I can add.

25 THE CHAIRMAN: Mr. Sedgwick?

26 MR. SEDGWICK: I have only one or two,  
27 Mr. Chairman, and they are, I am afraid, conventional.  
28 Mr. King, in the last paragraph on page 1, you mention  
29 that the loans that you make by agreement with the  
30 Aluminum Company are all amortized over a 25 year term.

1 As to the loans that your Company makes themselves, that  
2 is the ordinary person, are they ordinarily amortized  
3 or is there any balloon at the end of any fixed period --  
4 five or ten years?

5 MR. KING: They are all amortized, Mr.  
6 Sedgwick, there is no balloon. They could be for a  
7 different period of time than 25 years but they are  
8 all amortized.

9 MR. SEDGWICK: That is, if more is paid  
10 every six months, they would pay off sooner?

11 MR. KING: Oh, yes.

12 MR. SEDGWICK: You amortize principal  
13 and interest so that there is not a substantial amount  
14 due at the end of the fixed period?

15 MR. KING: That's right. There is no  
16 amount due at the end of a fixed period.

17 MR. SEDGWICK: Could we take it that  
18 the practice that you outlined in your letter is  
19 typical of the practice of the other trust companies?

20 MR. KING: I think it would be safe to  
21 say that most of them follow along the lines as described  
22 here, yes.

23 MR. SEDGWICK: Yes. And in your case,  
24 I take it from your letter, the actual lender is the  
25 trust company. That is you borrow on your credit and  
26 then the mortgagee borrows from -- the mortgagor rather --  
27 borrows from you, is that right?

28 MR. KING: Yes. We do have some funds  
29 from our estates and trusts and agencies.

30 MR. SEDGWICK: That's what I had in

mind that as to those funds do you follow the same principles of amortization?

MR. KING: Oh, precisely.

MR. SEDGWICK: Those are all my questions, Mr. Chairman.

THE CHAIRMAN: Mr. Irwin?

MR. IRWIN: Mr. Chairman and Mr. King, as a matter of information, does the Aluminum Company of Canada guarantee in any way the loan or do they issue security in regard to --

MR. KING: Yes. If a loan goes in default, the Aluminum Company guarantees our first portion of the mortgage.

MR. IRWIN: 66-2/3%?

MR. KING: Yes. We have the option of asking them to buy us out of our portion of the mortgage or we can take over their secondary position, in each case. It is our option.

MR. IRWIN: That would lead to a further question as to why the 1/4 of 1% rate above prime residential rate for those particular loans?

MR. KING: The 1/4 above 1% prime -- of the prime rate -- goes to the Aluminum Company.

MR. IRWIN: I see.

MR. KING: The Chartered Trust Company takes the prime rate on these loans.

MR. IRWIN: So on your 66 2/3% you get a return equal to the prime residential rate. On the 13 1/3 portion of the loan they get the prime rate plus 1/4 of 1%?

mind that as to those funds as you follow the same

principles of amortization

MR. KING: Oh, precisely.

MR. SEDGWICK: Those are all my

questions, Mr. Chairman.

THE CHAIRMAN: Mr. Irwin?

MR. IRWIN: Mr. Chairman and Mr. King,

as a matter of information, does the Aluminum Company

of Canada guarantee in any way the loan or do they

have security in regard to --

MR. KING: Yes, if a loan goes in

default, the Aluminum Company guarantees our first

Digitized by the Internet Archive

in 2023 with funding from

University of Toronto

of making them to pay us out of our portion of the

mortgage or we can take over their secondary position,

in each case. It is our option.

MR. IRWIN: That would lead to a

further question as to why the 1/4 of 1% rate above

prime residential rate for these particular loans?

MR. KING: The 1/4 above 1% prime --

of the prime rate -- goes to the Aluminum Company.

MR. IRWIN: I see.

MR. KING: The Chartered Trust Company

takes the prime rate on these loans.

MR. IRWIN: So on your 50 2/3% you get

a return equal to the prime residential rate. On the

1 MR. KING: Well, they get  $1/4$  of 1%  
2 above the prime rate on our portion plus on their own  
3 portion.

4 MR. IRWIN: What rate of interest  
5 would the Alcan be getting then on their actual advance?

6 MR. KING: I believe it is 8.3%.

7 MR. SEDGWICK: May I add one question  
8 to that. So that, in effect, the Alcan portion of the  
9 loan is a second mortgage and it carries roughly second  
10 mortgage rates?

11 MR. KING: Well, it matches the first  
12 mortgage.

13 MR. SEDGWICK: I know that, but --

14 MR. KING: In effect it is a second  
15 mortgage and I think it is quite a low rate of interest  
16 for a second mortgage.

17 MR. SEDGWICK: Yes, I believe it is.  
18 We have been told that 9 is a low rate for a second  
19 mortgage.

20 MR. KING: And I think the reason they  
21 are interested in this proposition is to sell aluminum,  
22 not to lend money.

23 MR. SEDGWICK: To sell Alcan houses.

24 THE CHAIRMAN: Mr. Lawrence?

25 MR. LAWRENCE: Mr. King, one of the  
26 Toronto trust companies regularly charges \$200.00 no  
27 matter what the size of the loan is, for fees or  
28 valuation fee or bonus -- Chartered does not do this  
29 as a regular custom?

30 MR. KING: No, I have not heard of

1 that at all. I don't know just what you are referring  
2 to that they charge \$200.00 -- we have no set fee.

3 MR. LAWRENCE: You are the first trust  
4 company representative, I think, to come before the  
5 Committee so these things aren't directed to Chartered  
6 as an individual company. But some of us have been  
7 intrigued by the British practice where you establish  
8 loan and trust company societies, which in effect are  
9 trust companies, I think, and they advance, in a great  
10 many cases, up to 90, 95% of the cost of the new house  
11 by way of a first mortgage. Why is the trust company  
12 practice here in Canada always been never to advance  
13 more than 2/3rds of the purchase price of the house?

14 MR. KING: Well, it hasn't always  
15 been. It is only in recent years they have been  
16 permitted to loan 2/3rds. It was 60% up to a few years  
17 ago.

18 MR. LAWRENCE: This is federal legis-  
19 lation?

20 MR. KING: Yes.

21 MR. SEDGWICK: It used to be 50%.

22 MR. KING: Yes, at one time.

23 MR. LAWRENCE: And are you governed now  
24 by federal statute in that you can only lend up to 2/3rds?

25 MR. KING: Yes, we are.

26 MR. LAWRENCE: Has the Company, as a  
27 matter of company policy, ever considered making any  
28 application to increase this at all?

29 MR. KING: We have considered it, that's  
30 all I can say about it.

1 MR. LAWRENCE: The thing in the back  
2 of some of our minds may be that if it works in Britain  
3 why in the world wouldn't it work over here? It would  
4 be a way to get rid of the second mortgage field in the  
5 way of new houses.

6 MR. KING: Well, I don't know how it  
7 works in Britain but it could be that it's insured.

8 MR. LAWRENCE: Yes.

9 MR. KING: So far as I know no insurance  
10 company in Canada will insure mortgage loans. I don't  
11 know of any. There is such a thing in the United States  
12 of insured mortgage payments.

13 MR. LAWRENCE: Is it -- perhaps it  
14 isn't fair to ask you your own personal opinions on  
15 these things but there is a great many years experience  
16 here and we are trying to find the answers to some of  
17 these things. What is your own opinion on the avail-  
18 ability or whether there would be any use in having  
19 mortgage insurance here.

20 MR. KING: I think it would be a fine  
21 thing. I think it would be a breakthrough because we --  
22 if we could have mortgage insurance in Canada.

23 MR. LAWRENCE: There is another growing  
24 trend, especially in Ontario, with trust companies lately  
25 and that is the emergence of the bank as far as gaining  
26 control of trust companies are concerned. Chartered  
27 Trust -- in effect the control of Chartered Trust now  
28 resides in a chartered bank, is this not true?

29 MR. KING: Yes.

30 MR. LAWRENCE: Would you be willing to

1 tell the Committee whether the trust company has normal  
2 mortgage operations using bank funds for this purpose?

3 MR. KING: I don't get your question.

4 MR. KING: Well, banks must find it  
5 useful because so many of them are doing it. Trust  
6 companies must find it useful because so many are getting  
7 into the field, to be taken over by banks. This is a  
8 fairly new development in the Canadian trust and  
9 banking field. Now, is one of the reasons for this,  
10 do you know, the fact that the bank can make available  
11 to the trust company to loan mortgage money whereas  
12 in the past the bank hasn't been in the mortgage field  
13 at all?

14 MR. KING: I can't answer that. I  
15 don't know about other banks or other trust companies.

16 MR. LAWRENCE: Well you don't have  
17 to answer --

18 MR. KING: We have an arrangement with  
19 the Bank of Nova Scotia with respect to mortgages.

20 MR. LAWRENCE: That's what I am driving  
21 at. Does the Chartered Trust in its normal, conventional  
22 mortgage field use any Bank of Nova Scotia funds?

23 MR. KING: Oh, no, no.

24 MR. LAWRENCE. Thank very much.

25 THE CHAIRMAN: Mr. MacDonald?

26 MR. MACDONALD: Yes. For this insurance  
27 angle, are you aware of any reasons as to why insurance  
28 companies have not moved into the field of insuring  
29 mortgages?

30 MR. KING: I'm really not aware of any.

1 The first thing that would come to mind -- I'm not sure  
2 of this though -- all you are trying to make them do  
3 is insure the upper portion of the mortgage, beyond  
4 the 2/3rds, and they may feel -- I remember talking to  
5 an insurance man about this -- they may feel that  
6 mortgages can decrease all across the country at one  
7 time, whereas if they are insuring for fire or other  
8 types of insurance you have claims spread out, whereas  
9 mortgages could conceivable -- you could be paying out  
10 on every mortgage at one time in Canada, if the real  
11 estate market or the mortgage market fell apart. I  
12 don't know. I've never spoken to an insurance official  
13 about this.

14 MR. MacDONALD: All you are, in effect,  
15 saying is that if it were done it would be best done, it  
16 would be most safely done, by a company that's in a  
17 number of insurance fields. But there are many of them  
18 that are in many fields now, why --

19 MR. KING: I don't mean it has to be  
20 a company that's in a variety of fields in the insurance  
21 business. I would think that if some insurance company  
22 had started this twenty years ago they would have a  
23 marvelous record of losses, but it is possible that you  
24 could have a good many claims all at once if you had a  
25 bad real estate market such as we did in the thirties.

26 MR. MacDONALD: Well, is there any  
27 reason inherent in Canada as to why they should be a  
28 bad record as compared to the U.K. where insurance of  
29 mortgages is, I understand, a practice?

30 MR. KING: No. I wasn't aware of it. I

1 am aware that it is done in the States.

2 MR. MacDONALD: To be very frank, Mr.  
3 Chairman, I wasn't aware of any of this until my friend  
4 asked his question, but it struck me as a very inter-  
5 esting point.

6 MR. KING: I think it is a very  
7 interesting point myself. As I say, it would be a  
8 breakthrough in the mortgage lending field if these  
9 things could be done.

10 MR. MacDONALD: Would it like result,  
11 as far as the consumer is concerned, in a greater  
12 security as far as the lender is concerned and, therefore,  
13 a lesser rate?

14 MR. KING: Oh, yes. I would think,  
15 just offhand, if the secondary portion of these mortgages  
16 could be insured then the second mortgage would become  
17 a first mortgage, in effect, as far as rate is concerned.

18 MR. SEDGWICK: Plus the insurance  
19 premium?

20 MR. KING: Yes, plus the 2% or  
21 whatever they --

22 MR. MacDONALD: Have we had insurance  
23 companies before us, Mr. Chairman? We haven't had  
24 insurance companies?

25 MR. PRICE: No.

26 MR. MacDONALD: This is a rather  
27 interesting angle. If all 9 to 12% could be brought  
28 down to 7% plus the insurance cost, this is a new  
29 possibility.

30 MR. SEDGWICK: Mr. MacDonald, some of

1 the insurance companies are, I believe, (rest inaudible)

2 THE CHAIRMAN: Any further questions,  
3 Mr. MacDonald?

4 MR. MacDONALD: I suppose just one  
5 point. Maybe some association of insurance companies  
6 might be the most appropriate body to ask?

7 THE CHAIRMAN: Yes, we will pursue  
8 this matter.

9 MR. MacDONALD: No, I have no further  
10 questions.

11 THE CHAIRMAN: Mr. White? Mr. Belanger?

12 MR. BELANGER: (First part of question  
13 inaudible). Are you the only company that deals with  
14 the Aluminum Company on behalf of --

15 MR. KING: Yes, we are at this moment,  
16 Mr. Belanger.

17 MR. BELANGER: You are the only one?  
18 -- that has some sort of arrangement between your  
19 company and --

20 MR. KING: Yes, that's right.

21 MR. BELANGER: (Inaudible)

22 MR. KING: It's a new venture for us.  
23 We have only been in this field for a year and a half.  
24 We expect not more than 5%, projecting it now, not more  
25 than 5% of our business will be --

26 MR. BELANGER: (Inaudible)

27 MR. KING: Oh, no, it's throughout the  
28 country. It goes from Vancouver to Montreal.

29 MR. BELANGER: (Inaudible)

30 MR. KING: The purpose is to create an

1 80% first mortgage and therefore eliminate the second  
2 mortgage which makes the houses more saleable and the  
3 Aluminum Company feel that from their standpoint, if  
4 they can sell that much more of them, I mean their  
5 houses, they are going to go into the mortgage field.  
6 As I said before, they are not anxious to be in the  
7 mortgage field but they want to sell aluminum and they  
8 will underwrite the second 13 1/3% of these mortgages.  
9 It's a distinct advantage to the purchaser of these  
10 houses.

11 MR. SEDGWICK: In what respect is  
12 that an advantage?

13 MR. KING: Well, he has a lower  
14 interest rate to pay. If he was carrying a first  
15 mortgage for 66 2/3rds and a second mortgage for 13 1/3,  
16 his carrying charge would be much higher, substantially  
17 higher, and this way he has one mortgage to contend  
18 with at a lower interest rate. So it makes the proper-  
19 ties quite a bit more saleable. You can buy a very  
20 nice -- these are not cheap houses, they are medium  
21 priced, \$22,000 to \$30,000 homes with 20% cash down, no  
22 second mortgage.

23 THE CHAIRMAN: Where are these homes  
24 located?

25 MR. KING: Well, in Toronto there are  
26 two builders building them. In the west end it is  
27 Edmund Peachy on Highway 27 and in the east end it's  
28 Arthur Blakeley. He's building in a couple of locations  
29 -- Henry Farm right now. And then they are also being  
30 built in two locations in Montreal, Durfie is one and I

1 don't know the other. They are being built in two  
2 locations in Calgary and various parts of Vancouver, and  
3 also London, Ontario.

4 THE CHAIRMAN: Mr. Reilly?

5 MR. REILLY: Yes. Mr. King, one of  
6 the things that we are trying to do in this Committee is  
7 to find out if there are any hidden charges. I notice  
8 in your letter that you say that there is an appraisal  
9 fee of \$2.00 per thousand and that all finder's fees  
10 are absorbed by the Company. Are there any additional  
11 charges whatsoever when you lend mortgages in addition  
12 to the mortgage interest rate and the charge for  
13 appraisal. Is there a legal fee, for instance?

14 MR. KING: The legal fee is paid by  
15 the borrower.

16 MR. REILLY: So it actually is an  
17 added cost to the borrower?

18 MR. KING: Yes. I mentioned that, I  
19 think, in the letter.

20 MR. REILLY: Are there any other costs  
21 except the legal fee and the \$2.00 per thousand and the  
22 interest rate?

23 MR. KING: Well, he has to supply us  
24 with a Furvey if he hasn't one in his possession. That  
25 would be all.

26 MR. REILLY: Legal fee and Survey. One  
27 thing I think we should clarify, and Mr. MacDonald has  
28 pointed out in this insurance business, that there might  
29 be some savings to the borrower if an insurance company  
30 would insure a loan. It's been my observation that

1 actually there is no savings to the borrower in the  
2 practice that is used in the United States if, in most  
3 instances, they apply this insurance only to new homes  
4 or nearly new homes, and actually what it does is  
5 protect the lender and they are charging an extra cost  
6 to the borrower in order to have the insurance. I  
7 thought perhaps that point should be clarified here. I  
8 don't think it is any particular saving to the borrower.

9 MR. MacDONALD: Well it depends, if I  
10 may just put the point here -- if the first mortgage is  
11 7% and the second mortgage is 12%, you can get your  
12 money, in effect, all in a first mortgage with insurance  
13 for the second mortgage portion of it. That's something  
14 less than 5% increase, then you are saving, it's as  
15 simple as that.

16 MR. LAWRENCE: Yes, except in most  
17 instances they won't give the large mortgage to take  
18 over the first and second and insure it for that amount.

19 THE CHAIRMAN: Mr. Irwin?

20 MR. IRWIN: Mr. Chairman and Mr. King,  
21 something was said a minute ago -- in regard to these  
22 homes in respect to which these 80% mortgages are placed  
23 with the cooperation of the Aluminum Company, is there  
24 some understanding as to the content of aluminum used in  
25 those homes? It wouldn't be available, let's say, to  
26 the home -- (last word inaudible)

27 MR. KING: No. The Aluminum Company has  
28 possibly 15 or 20 model homes which can be built under  
29 this plan and those are the only ones that would suffice  
30 as far as they are concerned. They qualify that --

1 conventional houses wouldn't.

2 MR. IRWIN: They would probably be  
3 homes built with aluminum siding or something like that?

4 MR. KING: Yes. There is a good deal  
5 of aluminum that goes into these homes.

6 THE CHAIRMAN: How long have you been  
7 with the Chartered Trust Company?

8 MR. KING: Twenty years.

9 THE CHAIRMAN: Were you in this  
10 business prior to that? I mean the same type of  
11 business?

12 MR. KING: No, I wasn't. I was in the  
13 real estate business.

14 THE CHAIRMAN: Have you any other  
15 suggestions you would like to make to the Committee  
16 about the mortgage business generally that might be  
17 an advantage?

18 MR. KING: I have nothing, I don't  
19 think, to add at this time.

20 THE CHAIRMAN: Any further questions?  
21 Thanks very much, Mr. King, for being with us today.

22 MR. KING: Thank you.

23 THE CHAIRMAN: Is Mr. H. W. Bender  
24 here?

25 Mr. Bender, I believe your brief has  
26 been distributed to all members of the Committee. Mr.  
27 Bender is President of the H. W. Bender Limited. He is  
28 in the real estate business and he is a graduate in law  
29 and economics in Germany and has been in the real estate  
30 mortgage business for some 22 years. Did you wish to

1 make any preliminary remarks?

2 MR. BENDER: Yes, I wish to make some  
3 preliminary remarks because it may put some things into  
4 the right perspective, and to also give some part of  
5 the history of this bonus plan, which is the subject of  
6 this brief. I am glad (next part inaudible) because I  
7 read over the weekend that the Committee of Social Work  
8 and their Services prepared a brief to the Board of  
9 Control to ask the Board of Control to permit the  
10 extension of N.H.A. (next part inaudible) -- not because  
11 the answer to this problem lies in an extension of  
12 N.H.A. but because I read that there is at least some  
13 growing public awareness that there is something wrong  
14 with the financing of homes which we are concerned with.  
15 I would give it a title, I would call it Sins of Mortgage  
16 Credit rather than Sinners of Mortgage Credit. Also  
17 there are wrongdoings and final punishment that makes  
18 very good newspaper reading but I feel -- and I have been  
19 22 years connected with this game and I think I know  
20 most of the people involved in it -- I feel there are  
21 not enough ( ) in this game, much more than in any  
22 other enterprise ( ), and secondly I feel that in  
23 the system of free enterprise where capital is one of  
24 the most competitive merchandises, no individual can,  
25 for any length of time, exert any monopolistic tendency  
26 or can write his own ticket on the price of capital  
27 because of this fierce competition in the field. There-  
28 fore, I feel that we should concern ourselves with the  
29 question of whether there is something wrong with the  
30 credit system with regard to older homes, with regard

1 to the fact that many people may not be aware of, that  
2 interest rates have dropped considerably over the last  
3 two or three years, I think almost one-third. And all  
4 what actually has been done by the government. I say  
5 this with deepest respect and sincerity was the time  
6 they placed the Mortgage Brokers Act was an accomplish-  
7 ment, to my humble opinion, that makes the mortgagor  
8 feel more miserable than before because it's pointed  
9 out in black and white how much he has to pay in interest  
10 and how little he has to pay in principal. What we  
11 should try is to find ways to guard ourselves against  
12 a recurrence of those rates which can happen in any  
13 given economical situation and even to decide whether  
14 we can find means and ways to bring present interest  
15 rates, which have dropped already considerably, even  
16 down to a lower level.

17 I started to concern myself with this  
18 problem about 10 years ago when two new words were added  
19 to the English vocabulary, mainly the two words discount  
20 and bonus mortgage. These were unknown to any average  
21 mortgagor and when subsequently a new species was created  
22 and headed for society, called the mortgage broker. We  
23 all knew mortgage brokers before negotiated conventional  
24 loans but he was a special species created to find  
25 people who want to sell bonus and discount mortgages and  
26 find people who wanted to buy them (rest of sentence  
27 inaudible). I prepared a typical statement, a sample  
28 of a case of a loan which had to be financed by private  
29 capital. A house which was denied conventional credit  
30 (inaudible) or only credit was possible for a very negligible

1 degree -- either because it wasn't solid brick or it was  
2 not a conventional garage or it was not detached or it  
3 had no side entrance or the cellar was ( ) or it was  
4 situated in a district which wasn't declared desirable  
5 for conventional loan companies, although many of those  
6 kind were put into those companies and provided (rest  
7 of sentence inaudible). This house had to be financed  
8 therefore completely by the public. Now I took a very  
9 conservative case here which can be shaded in any way  
10 or form to down payment, lower down payment and what  
11 have you, but this is a very conservative case where  
12 a dealer bought the house, such a house, for \$6,000  
13 cash -- maybe a little bit below the physical value,  
14 but the owner didn't know any other way to get his full  
15 cash and the dealer came with full cash. And he had  
16 in mind ( next part inaudible) and he had already gained  
17 some experience, and he put the price of it up to \$10,000.  
18 Now this sample shows that of more than \$4,000 (inaudible)  
19 -- the poor dealer only made only a net of \$650 dollars.  
20 Now if we analyze it, he took back two mortgages -- a  
21 first mortgage of 6500 and a second mortgage for 2500 --  
22 totalling to 9,000 and \$1,000 cash. He has to sell  
23 those two mortgages because he didn't want to become  
24 a mortgage investor, he wanted to get his cash out. So  
25 he found one man through a mortgage broker who paid him  
26 for the \$6500 -- he paid him \$5500 and he found another  
27 man who paid him 1600 for 2500. Now, those mortgagors  
28 were not all devils either because -- the mortgagees --  
29 because the first mortgagee was already up to 90% of  
30 the cash value, 5500 cash on a house which was sold for

1 \$6,000 and the (rest of sentence inaudible).

2 Besides -- and I want to say in all  
3 fairness, not because the black and whites -- besides  
4 in a rising market of real estate the investor has just  
5 a choice of either to make a profit in mortgages or to  
6 buy property. (rest of statement inaudible)

7 The mortgage broker -- this is one  
8 of his services -- he may look up 20 or 30 people  
9 before he found one who wanted to buy the mortgage, has  
10 to take him back, negotiate with the vendor. Now nobody  
11 of the lawyers here present will deny that even a  
12 lawyer ( ) and if there was a lawyer who had a  
13 client himself, he would charge another x amount for  
14 the recommending this mortgage to his client, collecting  
15 it for him and so on. Anyway, the whole -- we can say  
16 that everybody who was busy in the act did something  
17 for his money, but what a detour is caused in times of  
18 computers and automation and standardization and other  
19 theories devised to save costs in mortgage credit. Now  
20 I was, myself, rather attracted to those kinds of  
21 investments when I started buying those mortgages myself.  
22 I had no disagreeable relations to the mortgagor because  
23 I got into the act after the transaction and he didn't  
24 care whether he pays his mortgage to Mr. Jones or Mr.  
25 Bender and I thought it would be a good idea to go to  
26 Switzerland and sell the scheme to Switzerland investors.  
27 Because I was once a specialist in mortgages and fore-  
28 closure laws I would be able to show them the legal  
29 differences and so on. They are very careful people,  
30 these Swiss. And (rest of sentence inaudible) -- the

1 money started pouring in and I was suddenly caught with  
2 the administration of about 700 mortgages -- good for  
3 any smaller trust company, I guess -- because I had to  
4 ( ) and because I was able, unlike other brokers  
5 who just negotiate, to see the human hardships. And  
6 I also saw the predicament in which those people would  
7 find themselves when those mortgages become due.

8 I would like to mention something --  
9 if you look at the statement how nonsense can make  
10 nonsense -- this inflation of prices in the older  
11 houses brings the price relation very close to the  
12 price of new N.H.A. financed bungalows, created a  
13 completely new demand suddenly for N.H.A. bungalows,  
14 which didn't exist before and fooled the government  
15 in this regard to the actual overall need for new  
16 bungalows. The old homes were left and the others  
17 were preferred because they had 50 foot lots, they  
18 had one mortgage for 25 years instead of two mortgages  
19 for 5 or 3 years and so on. And that led to the over-  
20 production in metropolitan cities ( part of statement  
21 inaudible) led to overproduction of 86,590,000 units  
22 idle with a rental loss of \$12,324,000. You see it's  
23 a big subject, I can't go into it today, but this is  
24 what N.H.A. can do.

25 Now after I visualize what may happen  
26 to those mortgagors I went to -- when the mortgages  
27 come due and when those investors want to have their  
28 whole ( ) established -- originally it was for 15  
29 when the mortgage came due they didn't want to let it  
30 stand for 7. And the dealer had to (rest of statement

1 inaudible).

2 I prepared a brief (next part inaudible)  
3 and I took it to -- in this building, I forgot his name  
4 -- and I suggested that the trust company needs special-  
5 izing, specializing on those neglected credits and show  
6 sell trust certificates over the counters of Canadian  
7 and German banks at a rate that is guaranteed by the  
8 Province of Ontario, (rest of statement inaudible)  
9 the income legitimately would go out of the country not  
10 as it was before the foreign capital came in took all  
11 the gravy. But this gentleman I remember told me, don't  
12 ask me for getting guarantees, we are overextended, we  
13 give guarantees to ( ) in New York and to ( ).  
14 So this was -- I don't think we can reconstruct because  
15 the initial markets have changed differently. But at  
16 that time it would have saved a lot of human hardships  
17 if it would come in time.

18 Then I had something to do in Ottawa  
19 and I went to see N.H.A. Central Housing and I pointed  
20 out the dangers of N.H.A. which I have put here in  
21 another article, and the distortion of prices and the  
22 great imbalances between secondhand and new merchandise.  
23 And I had at that time the idea that extension of N.H.A.  
24 for older homes would be a good idea. But I don't want  
25 to take any credit for it, I had the idea before anyone,  
26 before anybody else had it, but I have changed my mind  
27 and as I pointed out in this brief, (rest inaudible)

28 I got very frustrated and just  
29 confined myself to literary outburst and I took most  
30 of these ideas and a few new ones into this brief, which

1 I shall read with your permission. Maybe when something  
2 is not understandable, either by my having German  
3 accent which I haven't lost yet or because I didn't  
4 express myself very clearly, some people can interject.

5 I tried in this brief to find a  
6 formula (rest of sentence inaudible) -- to increase  
7 supply and reduce demand.

8 "In any system of free enterprise, the  
9 price of private capital depends solely on the same  
10 factors as the price of any other competitive merchandise,  
11 namely upon supply of demand and the cost of production.  
12 Any usury laws, which try to enforce price ceilings  
13 ignoring or counteracting those price components will  
14 either scare capital away or will provoke loopholes  
15 through which Capital can find its way back at its own  
16 terms."

17 I remember a joke in the Old Country  
18 in the First World War -- Who is the greatest magician?  
19 The answer was the Price Commissioner because as soon  
20 as he appeared everything disappeared. You know yourself  
21 what people can do to get around controlled rentals --

22 "High interest rates do not present  
23 a legal but a strictly economical problem. Only through  
24 changing the pattern of supply and demand and reducing  
25 the cost of Capital, can we obtain better conditions  
26 in our Mortgage Credit.

27 "How can we reduce demand for private  
28 capital? While with regard to the smaller industrialist,  
29 farmer or merchant our mortgage credit leaves likewise  
30 much to be desired, this brief shall be primarily

1 concerned with the Mortgage Credit for older homes of  
2 the lower and middle class income groups. Private  
3 Capital was only able to take over this field because of  
4 the steadily increasing withdrawal of institutional  
5 Capital from the financing of such older properties during  
6 the last two decades. The post-war boom years have  
7 opened ; up opportunities to our Conventional Lending  
8 Institutions, which they never had before in form of  
9 unloading their funds in huge amounts at low adminis-  
10 tration costs for the financing of Shopping Centres,  
11 Subdivisions, Apartment Buildings, Motels, Bowling Alleys,  
12 which can feed, house and entertain a population, which  
13 Canada may not have reached within another decade." And  
14 I call it the New Addiction (rest of aside inaudible).

15 "The Financing of workingman's older  
16 homes, where a dependable flow of mortgage credit at  
17 reasonable rates is of great social and economical  
18 importance, was left more and more to the Private Money  
19 Lenders at any price the market could bear. Looking  
20 back to those Boom Years, present high interest rates  
21 can be considered as bargain rates in comparison to the  
22 prices at which Private Capital was gladly accepted  
23 (and I emphasize it was gladly accepted) by the mortgagors  
24 at that time. However, neither the general public nor  
25 the Government paid much attention to that situation  
26 for the simple reason that even the highest interest  
27 rates were easily absorbed through high wages, steady  
28 employment, good rental possibilities and last but not  
29 least, high re-selling profits of the property owners  
30 due to sharply rising real estate values. It is, there-

1 fore, only fair to say, that any high profits made by  
2 mortgage lenders during those years merely just compen-  
3 sated them for the profits they could have made by pur-  
4 chasing instead of mortgaging those properties. We  
5 also may learn from these years, that any legislation  
6 of interest rates can become very unrealistic as it is  
7 not able to consider the fluctuations of currency and  
8 real estate values. (Aside inaudible)

9 "We can also not overlook the fact,  
10 that the face value of many private mortgages, stuffed  
11 with bonuses, respectively discounts, exceeded in many  
12 cases the physical value of the properties in view of  
13 the sudden rise of prices through the unprecedented  
14 influx of immigration, with the final result of heavy  
15 losses after the honeymoon was over. The story of  
16 mortgage credit is, therefore, by no means a black and  
17 white one. This, however, does not change the fact that  
18 Private Mortgage Capital by its very nature can not be  
19 considered a dependable source for long term mortgage  
20 credit because it will pull out from the mortgage market  
21 as soon as it fears inflation, respectively any increase  
22 in real estate values and will only return to it in time  
23 of stationery or depressive economy with no other  
24 attractive investments elsewhere. Institutional Capital  
25 on the other hand, does not need to concern itself to the  
26 same degree with such fluctuations. Its liabilities are  
27 more or less limited by the interest rates, guaranteed  
28 to their policy holders, owners of their trust certifi-  
29 cates and other depositors, who in turn become the actual  
30 losers through any adverse surrency changes. Some European

1 countries with greater experience in this field have  
2 found various ways of overcoming this weakness in invest-  
3 ments of this type through inserting gold and other  
4 clauses in their policies, certificates and mortgages.  
5 At any rate, with and without such efforts to broaden  
6 the market for such investments, Institutional Mortgage  
7 Capital must be considered as the ideal source for long-  
8 term mortgage credit. Our various levels of Government  
9 from which Credit Institutions obtain their Charter, must  
10 find means and ways to enforce a sufficient portfolio at  
11 all times for the cultivation of mortgage credit to older  
12 homes regardless of its location or structure as long  
13 as it offers decent shelter for the lower income groups."  
14 I didn't intend to be dramatic about this. "One hardly  
15 has to point out the tremendous importance of the steady  
16 availability of conventional credit for the financially  
17 weaker mortgagor as he only then can use his limited  
18 consumer power for the daily necessities of life instead  
19 of wasting it on excessive capital obligations."

20 "It must be clear by now to everybody,  
21 that in a depressive economy such capital obligations  
22 can lead more and more to a conversion from genuine  
23 purchase power into borrowed purchase power on the part  
24 of the lower income groups and to the very undesirable  
25 state of Capital Richness and Money Poverty, which  
26 signifies our present state of economy." If anybody wants  
27 to come to my office and see one minute a man coming in  
28 with \$100,000 in his pocket and the next minute somebody  
29 comes to make his mortgage payment, then he will know what  
30 I mean by Capital Richness and Money Poverty.

1 "As soon as Institutional Capital will  
2 be made aware again of their social duties toward the  
3 lower income groups, whose dimes and dollars contribute  
4 greatly to their capital power, private capital is bound  
5 to become permanently competitive with institutional  
6 rates and will not be put into any monopolistic position.  
7 The introduction of an Assigned Risk Plan as found in  
8 our present Automobile Insurance System or the creation  
9 of a specialized Government Bank (aside inaudible) for  
10 such mentioned credits would be the alternative, however,  
11 much less desirable solution for gaining greater inde-  
12 pendence from Private Mortgage Capital.

13 "How can we broaden the market for  
14 secondary mortgage financing? While there is temporarily  
15 an abundance of private first mortgage capital available  
16 competing eagerly with conventional rates in the field  
17 of selected risks in lieu of other more lucrative invest-  
18 ments, there is still a great necessity for establishing  
19 a broader market for secondary mortgage financing, which  
20 under our present laws can only be provided through  
21 private capital. There are, however, many reasons why  
22 private investors lose their appetite more and more, for  
23 secondary mortgage credit.

24 "Lack of legal protection. Second  
25 mortgages are at present rather poorly protected against  
26 the legal actions by the first mortgagee. The first  
27 mortgagee does not need to give sufficient warning to the  
28 second mortgagee as soon as the mortgagor gets into  
29 default of payments under the first mortgage. (Well, I  
30 found that institutional companies with whom I put

1 the records in cases where we are holding the second,  
2 mostly have the courtesy of letting me know the time  
3 that there is a problem but there are many private  
4 mortgagors who you call up and he wouldn't let you know,  
5 he just forecloses it). "Only after considerable legal  
6 expenses are incurred through the commencement of fore-  
7 closure proceedings, will the Court finally order a  
8 notice to the second mortgagee to pay up all arrears and  
9 costs within 10 days. If he cannot raise the necessary  
10 funds within such a short time, he is faced with further  
11 Court and Lawyers costs and must pay off the whole  
12 accelerated capital within 6 months. But the real danger  
13 for the second mortgagee lies, however, in Power of Sale  
14 Proceedings by the first mortgagee in which case no notice  
15 has to be given to the second mortgagee and the property  
16 can be sold at any "reasonable price" without the  
17 knowledge of the second mortgagee. (Aside inaudible)  
18 It is obvious that such lack of legal protection is  
19 sufficient reason for any conscientious lawyer to advise  
20 his client against such investments. Many second  
21 mortgagees have also incurred considerable losses through  
22 fraudulent misrepresentations by the Assignee or his  
23 Agent as to the true sales price and cash down payment  
24 by the mortgagor when purchasing the property. (Aside --  
25 it is inconceivable what the human mind can cook up to  
26 establish a higher value of the second mortgage than --  
27 rest inaudible). For instance, a sales price of \$12,000  
28 with a down payment of \$2,000 is represented while the  
29 actual sales price was only \$10,200 and the actual cash  
30 down payment was only \$200, in which case the second

1 mortgage would have never been acquired because of the  
2 poor equity of the mortgagor. Very few mortgagees are  
3 experienced enough to insist on sworn affidavits from  
4 the vendor or the mortgagor, than an amount of \$2,000  
5 actually changed hands without any side agreements, nor  
6 are they aware that they have otherwise no legal cause  
7 of action against any party involved. My recommendations  
8 to the Department of Insurance several years ago to  
9 impose similar penalties upon Real Estate and Mortgage  
10 Brokers for fraudulent misrepresentations of the actual  
11 value of the second mortgages as provided for the sale  
12 of other securities were unsuccessful. The authorities  
13 took the strange attitude that second mortgage investments  
14 are only meant for people who know what they are doing  
15 and should not depend upon any representations from any  
16 party whatsoever. Such conception completely ignores  
17 the important fact, that second mortgage credit is here  
18 to stay and that we have to make it respectable and  
19 that only the broadest possible market with the highest  
20 legal protection can keep prices at a reasonable level.  
21 In this connection, also a revision in the present  
22 tax laws, which no longer consider discounts as capital  
23 gain in contrary to the purchase of shares and bonds,  
24 might be recommended in order to increase the attractive-  
25 ness of such investments."

26 Now, the next thing deals with how can  
27 we reduce costs? "There is some peculiar feature in the  
28 cost structure of mortgage credit inasmuch as the cost  
29 increase proportional with the decreasing amount of  
30 borrowed dollars and years of repayment. If, for instance,

1 the loan is only \$1,000 for a period of only one year,  
2 the total cost for legal, finder fees, inspection,  
3 brokerage, etc. could go very well over 28% without being  
4 called excessive. The reason being that there are several  
5 items in the cost structure which do not change with  
6 the size of the loan. For instance: Minimum legal fees  
7 \$35.00, Disbursements including any discharges necessary  
8 \$15.00, Inspection fee \$15.00, Minimum Brokerage fee  
9 \$75.00, brings the loan cost up to 14%. If for instance,  
10 such small loans are requested subject to a high N.H.A.  
11 mortgage (and they come every day, say \$1,500 down and  
12 want a second mortgage for \$1,500), leaving very little  
13 equity for the owner, an interest rate of 15% could be  
14 justified, meaning a total cost for the one years' loan  
15 of 29%. I want to submit these calculations in all  
16 fairness, as the public ire seems to be aroused by the  
17 high cost for small loans.

18 "I actually would not have any suggestions  
19 how those various cost items could be decreased by any  
20 worthwhile degree. I have, however, various suggestions  
21 regarding the reduction of cost for larger loans and will  
22 mention a few highlights at this point.

23 "1) Title Insurance (everybody raves  
24 about Title Insurance, the only thing is about it you  
25 can't transfer it -- it's not good for the next man, he  
26 is not protected). Title Insurance should be made  
27 transferable to any new mortgagee.

28 "2) A decreasing scale of brokerage and  
29 legal fees for loans over \$10,000 as neither party is  
30 involved in a proportionally higher amount of work.

1 "3) Reduction of Land Title searches  
2 because of lesser work and responsibility.

3 "The salvation for the high cost of  
4 small loans lies, however, in a different direction.

5 "Banks must enter into the field of  
6 secondary mortgage credit. There is no organized second  
7 mortgage market at present in Canada. There is no mort-  
8 gage exchange somewhere downtown. (There was one but it  
9 was short-lived). There are only individual Brokers  
10 scattered around, who through continuous costly adver-  
11 tising try to make themselves known to the public. There  
12 are also recently a few companies in existence spending  
13 considerable funds on lavish offices and advertising  
14 their "honest" interest rates of 12% plus expenses.  
15 But I do not predict any permanent future for them, as  
16 they are thriving on the temporary abundance of syndi-  
17 cated funds at rates of about 8 - 9% yearly, leaving a  
18 margin, which may not even cover their cost of operation  
19 including unavoidable losses. (Because there is much  
20 more administration work on smaller loans than on bigger).  
21 Another drawback of such standard interest rates of 12%  
22 is that many loans lying well below the limits of 80%  
23 of the value, would deserve according to their much lower  
24 risk a much more favourable rate, which those companies  
25 could not afford to grant.

26 "All this is going on while there is on  
27 every major street corner a branch of our great Canadian  
28 Banks, whose executive staff should have an adequate  
29 knowledge of local real estate values, (at least of local  
30 real estate values). Here are Billions of Dollars in-

1 vested in office facilities and personnel capable of  
2 handling secondary mortgage credit just as well as they  
3 handle the much more tedious business of granting credit  
4 under the Small Loan Act, which allows them to accept  
5 chattel mortgages on much more risky securities as fur-  
6 niture or cars. The Bank Act, however, does not permit  
7 the acceptance of the most stable security, namely Real  
8 Estate, for looking after legitimate, bona fide, second-  
9 ary mortgage financing. The argument, that Banking  
10 does not go well with longer term mortgage credit, does  
11 not hold water as Banks recently expressed keen interest  
12 in first mortgage business in order to increase their  
13 Bank rate by 1% or more. Besides, some of those funds  
14 could be easily recovered through the sale of "recommended"  
15 mortgages over the Bank Counter at a lower interest rate  
16 while the Banks would keep such difference for collecting  
17 or even guarantying such mortgages to their clients. (I'm  
18 thinking not of those mortgages which are very small  
19 first mortgages and the question is why don't they  
20 increase the first mortgage and you get the answer it  
21 does not pay them in many cases to increase those  
22 mortgages because the interest rate is very low -- the  
23 old loan was 6%, the new loan would be  $7\frac{1}{2}$  so they have  
24 to pay  $\frac{1}{2}\%$  on the total mortgage, it would amount to 10%  
25 for the amount they need actually, for the difference.  
26 Secondly they would like a loan that they can pay off  
27 but if they put a bigger mortgage on they have a closed  
28 mortgage and they can't pay it off. So it pays them  
29 to go and get a mortgage which actually lies within the  
30 limits of a first mortgage but it's called a second

1 mortgage and they have to pay 12% plus expenses even if  
2 they get it from a loan company and this is too high  
3 for the risk involved. And there are many of those  
4 cases, legitimate demands for second mortgages.)

5 "As there is a great demand for first  
6 class second mortgages well below the 80% limits, interest  
7 rates for such mortgages could be reduced down as far  
8 as 8% per annum which would still create a very attract-  
9 ive source of additional banking business. In case that  
10 the Bank Managers or their Assistants should claim  
11 complete ignorance in appraising real estate values,  
12 outside appraisals could be obtained at nominal fees.  
13 Why has no one pressed yet for an amendment to the Bank  
14 Act accept the writer, who has tried in vain since the  
15 last 7 years to point out such necessity in public?"

16 MR. BELANGER: Who did you make your  
17 representation to?

18 MR. BENDER: I made the -- the Bank  
19 Amendment Act I made just to newspapers and to Central  
20 Housing to whom I asked to present this brief. In 1956  
21 -- this is several years ago -- over to the Finance  
22 Minister, whoever was in charge. But I sent no brief  
23 to the Bank of Canada --

24 "N.H.A. for older homes. But why  
25 worry about the weaknesses of private mortgage credit  
26 if our Government is ready and able to step in whenever  
27 private enterprise fails to do the job. The extension of  
28 N.H.A. mortgages to older homes seems to be such an  
29 obvious solution that even the writer recommended it  
30 seven years ago, a long time before anyone else had this

1 "genius" idea. But after having observed from a rather  
2 close range the dangerous side effects of "N.H.A. Finan-  
3 cing", the writer has come to the firm conclusion that  
4 the three letters "N.H.A." stand for the three words  
5 "No Healthy Answer" to our economical problems. He has  
6 elaborated on this subject in greater details in an  
7 article called "N.H.A. A DANGEROUS BOOSTER DRUG",  
8 published in the "Property Owner", in March, 1961. One  
9 of the many idiosyncrasies of N.H.A. is the creation of  
10 two different price patterns for one and the same type  
11 of commodity depending whether it has received the  
12 blessings of the "N.H.A. Financing" or had to rely on  
13 ordinary institutional or private financing." (If you  
14 look through statements of apartment houses, (rest of  
15 aside inaudible) -- just depending whether this man is  
16 ready when Santa Claus opens his big bag or he was just  
17 caught between two elections or what have you.) "However,  
18 even the most enthusiastic supporters of the idea of  
19 "N.H.A. Financing for Older Homes" could hardly expect  
20 that the Government would extend "N.H.A. Credit" to all  
21 types of older homes in order to avoid such injustices.  
22 As no one has yet found the solution where to draw the  
23 borderline, private enterprise will just have to pull  
24 itself out by their own steam unless it wants to surrender  
25 absolutely to overall State Financing.

26 "Excessive high amortization payments"--  
27 this is a subject which I did not publish before but --  
28 it sounds silly but it's so important -- if you really  
29 look at the figures that I would really like you to pay  
30 attention to this.

"The spending power of owners of older homes is not only weakened by costly secondary financing but also by excessive amortization payments on first mortgages. As far as Institutional Loan Companies still consider loans on older homes, the amortization period for such mortgages is approximately 10 years only." (That means the house is worth nothing after 10 years, in the minds of the loan companies). "While the interest rate may be  $7\frac{1}{2}\%$ , the actual monthly blended payments would amount to  $14\%$  per annum." (I have a table here if you want to look at it). "Now it's obvious that such a high rate can make it impossible for the home owner to use his income power for the faster amortization of expensive second mortgage credit (he is so busy paying of  $7\%$ , he has no money left to pay off  $12\%$ ) or the other necessities of life. There is no justification for such high amortization payments on first mortgages.

"Plumbing, furnace, roof, etc., are bound to be replaced periodically for the protection of the home owner. Other components like basements, floors, steps, and walls hardly depreciate at all. The land itself, amounting to about one-third of the lending value, rather gains in value over the mortgage period in any growing city. Many home owners are also constantly improving older homes by modernizing kitchens, bathrooms, etc. No wonder, therefore, that during the last 25 years mortgage loans, after their expiration, were increased beyond the original amount. During the mortgage period, however, the owners were faced with unnecessary financial burdens and sometimes had to

1 borrow additional funds in order to look after their  
2 mortgage obligations. Drastically reduced first mortgage  
3 payments in conjunction with secondary bank financing at  
4 reasonable interest and amortization rates would make  
5 the extension of "N.H.A. Credit" unnecessary and free  
6 enterprise could finally establish in all areas of real  
7 estate, an equal pattern of financing. Thus the great  
8 difference in property values created through preferred  
9 and non-preferred financing could be wiped out and  
10 normal trends in balances could be established. Only  
11 then, the cautious Buyer will once more be guided by the  
12 price alone and not by the way the property is financed.  
13 Only then he will be able to pay off a lower priced  
14 property within a reasonable time and free his income  
15 for the other essentials in life instead of burdening  
16 his grandchildren with an unpaid mortgage on a glamorous  
17 bungalow, which was only brought within the range of  
18 his income through fictitious, abnormally low monthly  
19 payments.

20 "Let us finally mention another problem  
21 in financing older homes to which very little public  
22 attention has been paid so far." (I don't know how much  
23 experience other people have had, but I had about 20  
24 consultations in the last few weeks).

25 "There exists at present a growing danger  
26 of cancellation of fire insurances on older homes,  
27 especially of non-solid brick construction. Only a few  
28 non-tariff companies still accept those fire risks mostly  
29 for the sake of accommodating such agencies, which provide  
30 them with other "more attractive business". The hand-

1 writing on the wall shows, however, that even those  
2 companies will withdraw from this field as soon as their  
3 portfolio is overstocked with such type of insurances.  
4 The repercussions on obtaining mortgage credit on those  
5 properties are obvious. As also Fire Insurance Companies  
6 are not Public Utilities but operate under free enter-  
7 prise, ways and means must be found to protect every  
8 home which gives decent shelter to our families with  
9 adequate fire insurance at all times. The introduction  
10 of an "Assigned Risk Plan" may be one of the answers.  
11 A better solution would be to allow such cancellation  
12 only if home owners refuse to carry out any necessary  
13 repairs to wiring, etc., in the interest of better fire  
14 safety.

15 "I hope that I have established at least  
16 one fact: This is not a topic which can be solved by  
17 Hush-Hush Columnists or by Good Doers with no knowledge  
18 of the tricks of the trade. What seems to be imperative  
19 is the appointment of a special commission composed of  
20 representatives of Federal and Provincial Governments  
21 and a handful of unbiased experts, who have no material  
22 interests, to make a thorough study of this rather  
23 complex field, which the writer could only touch upon in  
24 a very hasty manner. The final goal of any recommendations  
25 must be that lower and also middle class income groups,  
26 which contributed with their dimes and dollars greatly  
27 to the Capital Power of our great Banks, Life Insurance  
28 and Mortgage Companies, should be able to obtain their  
29 fair share in case of legitimate need for mortgage finan-  
30 cing. Otherwise free enterprise will have failed

1 Democracy."

2 MR. MacDONALD: I think this should be  
3 subtitled, Mr. Chairman, one of the most devastating  
4 condemnations of the free enterprise system and the most  
5 far-reaching efforts to try to save it from its own  
6 deficiencies.

7 MR. SEDGWICK: I'm a little handicapped  
8 in asking any questions because I only read it after I  
9 came in here and listened to it and it is a philosophical  
10 discussion. But the principle recommendations that Mr.  
11 Bender makes are drastic alterations to the Bank Act and  
12 drastic alterations in the N.H.A. system and a quite  
13 radical amendment to the Income Tax Act -- as to which  
14 this Committee has no power. And when you get away from  
15 those recommendations there isn't so very much left.  
16 There is one thing, Mr. Bender, and I say this to your  
17 Company, it is clear that one of the risks of second  
18 mortgages is the fact that the buyer, the mortgagee,  
19 can sell it without notice and I think steps are afoot  
20 to amend the Mortgage Act -- you may be aware of them --  
21 so that that will no longer reside in the first mortgagee,  
22 he will have to give the second mortgagee notice and  
23 that will make second mortgages a little more attractive.  
24 Such legislation is proposed -- and that would seem to  
25 be about the only part of your brief -- it would be  
26 in the hands of the Provincial Legislature.

27 MR. BENDER: Well, the Provincial  
28 Legislature as far as Charters of companies working under  
29 the Provincial Charter. I think it is 66% of Provincial  
30 Charters, Dominion Charters are only in 15%. If any

1 pressure can be exerted to companies to operate under  
2 the Provincial Charter then that would be something to  
3 concern us because this is a very important thing.

4 MR. SEDGWICK: I know the insurance  
5 companies are governed by federal charters (rest inaudible)  
6 I can't think that very many of the suggestions that  
7 you made that this Committee, being a Committee of the  
8 Legislature, could take any action on.

9 MR. BENDER: (inaudible)

10 MR. SEDGWICK: As far as risk of  
11 insurance, I had not thought it was so difficult to get  
12 insurance on household property.

13 MR. BENDER: On one street alone (rest  
14 inaudible)

15 MR. SEDGWICK: I suppose it's the thing  
16 applied to automobiles probably an assigned risk policy  
17 could be made to apply to houses.

18 MR. BENDER: What they do now, they  
19 have a whole group of inspectors -- they have an inspector  
20 go around to 100 properties a day -- if they find one  
21 that wasn't painted they put the report in to cancel  
22 fire insurance. They haven't even gone into the house.  
23 If a man has to do a hundred houses a day he has no time  
24 to go into the houses. And I had to plead with another  
25 company because I gave this company some apartment insur-  
26 ance business. They said unless you take something from  
27 me (rest inaudible) It shouldn't be. Actually I don't  
28 think the fire risk is greater because there was no claim  
29 made in all those cases. They just didn't like the  
30 houses.

1 MR. SEDGWICK: Mr. Bender, what happens  
2 in those circumstances to the mortgagee?

3 MR. BENDER: That's what I wanted to  
4 know. The mortgagee has no other rights than the owner  
5 has.

6 MR. SEDGWICK: He has no right of  
7 foreclosure?

8 MR. BENDER: But in the meantime he  
9 can foreclose the property which is not insured.

10 MR. SEDGWICK: Could you give the  
11 Committee specific addresses of properties --

12 MR. BENDER: (Inaudible) If I don't  
13 get kicked out by everybody, I give them to you.

14 MR. MacDONALD: Mr. Chairman, can I  
15 deal with this one point that Mr. Sedgwick has raised?  
16 On the possibility of an Assigned Risk approach -- I  
17 don't happen to have the details with me now, but I know  
18 a chap who has been drawing this to my attention and  
19 this is -- his suggestion is that the areas which are  
20 in effect, on which they are withdrawing the insurance  
21 are so large that I doubt whether you could operate an  
22 assigned risk.

23 MR. BENDER: (Inaudible)

24 MR. MacDONALD: For example, my  
25 information was that much of this part of the City here,  
26 for example, is now wiped out. Doesn't Bloor Street  
27 from east and --

28 MR. BENDER: Yes.

29 MR. MacDONALD: They won't insure or  
30 they are in the process of withdrawing for the reasons

1 that Mr. Bender rather graphically put -- because of  
2 some horse trading that is going on behind the scenes  
3 with somebody who is in a position to force them to  
4 take that as compensation for --

5 MR. SEDGWICK: (Inaudible)

6 MR. BENDER: People who are inspecting  
7 probably 100 properties a day and people will not be  
8 home and there are requisitions made by the Building  
9 Department. Inspectors have not looked into the inside.  
10 This is what bothers me because at least if they tell  
11 an agent about a situation to put an insurance agent  
12 into, they should have the courtesy of accepting their  
13 investigating. There are legitimate cases where there  
14 is rubbish in the basement or where the wiring is very  
15 bad (rest inaudible) -- but I wouldn't even mind if  
16 they would up the rate because it's a negligible amount --  
17 (next part inaudible) -- but they don't do it that way --  
18 (rest inaudible).

19 MR. MacDONALD: Mr. Bender doesn't want  
20 me to make political speeches and I will try to fore swear  
21 it, Mr. Chairman, but what, in effect, you are having  
22 now is that the fire insurance companies are unloading  
23 very big chunks of coverage that they have held because  
24 it is a high risk area. As Mr. Bender says, they are  
25 not even considering the proposition of higher rates.  
26 They are just unloading it. As I have been told, and  
27 Mr. Bender confirms it, it's almost a designation of  
28 a block -- just like this --

29 MR. BENDER: Pardon the interruption,  
30 but so far one insurance company -- I don't mention --

1 even refused loans in districts where the general trust  
2 found it desirable to put up mortgages. It doesn't make  
3 sense.

4 MR. BELANGER: What is the purpose  
5 behind it?

6 MR. MacDONALD: They are unloading  
7 what they consider a high risk area. It's not an  
8 uncommon practice. I mean the practice of not maintain-  
9 ing health insurance or hospital insurance on somebody  
10 who gets over 65 years of age. Senator Roebuck one time  
11 hit the headlines because when he got to 65 the company  
12 wouldn't continue his policy that he had held for 30  
13 or 40 years because presumably after 65 this is a general  
14 high risk area. Now the same kind of practices emerge  
15 in the fire insurance field. This is a high risk area  
16 so out it goes.

17 MR. BELANGER: (Inaudible)

18 MR. SEDGWICK: The building code has  
19 nothing to do with it.

20 MR. BELANGER: What I am talking about,  
21 Mr. Sedgwick, is in some of these old properties the  
22 building inspector goes in there and says, "Look here, if  
23 you don't make certain repairs in this thing we are  
24 going to tear down the place", and that's it.

25 MR. SEDGWICK: Then, of course, the  
26 problem of insurance disappears. Mr. Bender is talking  
27 about the houses that are not condemned.

28 MR. BENDER: Not condemned.

29 MR. SEDGWICK: Yes, not condemned. Then  
30 they present no problem, they are torn down, they are

1 not insured, they are uninsurable, they are being  
2 replaced by empty land, of course.

3 THE CHAIRMAN: Except, Mr. Sedgwick,  
4 the thing is going from bad to worse because as Mr.  
5 Bender just said you even have a company that is  
6 willing to lend money -- for example to build a new  
7 home in what might have been a condemned home area --  
8 but the insurance company, because it is in the block  
9 they are clearing out of -- and by a block it may be a  
10 square mile in the heart of the City --

11 MR. BENDER: They will say, "We don't  
12 mean your house, we mean the house next door".

13 MR. SEDGWICK: And consequently a fire  
14 risk to your house. I've never heard of it before.

15 MR. BENDER: That's where the State  
16 comes in, it has to come in, to allocate this to each  
17 company to a certain extent.

18 THE CHAIRMAN: Did any of these companies  
19 ever tell you that they had too many homes insured in  
20 that --

21 MR. BENDER: Yes. On ( ) Avenue  
22 for instance, in the east end -- ( ) Avenue is a  
23 very nice middle-class, workingman's area, mostly brick  
24 homes -- but they had some record somewhere that there  
25 were some cranks --

26 THE CHAIRMAN: Some what?

27 MR. BENDER: Some cranks, some firebugs  
28 around -- firebugs apparently only live on certain  
29 streets -- I don't know. (Laughter) (Rest inaudible)

30 MR. SEDGWICK: Would you run an Assigned

1 Risk, in your submission, would you run it about the  
2 same way the Assigned Risk is operated in automobile  
3 insurance?

4 MR. BENDER: Well I would have to raise  
5 rates a little more -- in the automobile business it  
6 costs ten dollars --

7 MR. SEDGWICK: I wasn't speaking about  
8 rates, I'm thinking about every company having to take  
9 so much so no one company would hold all the --

10 MR. BENDER: I can't see any other  
11 way unless you want to incorporate a Provincial company.  
12 I think that would be the best way. It may take new  
13 methods of progression by the way of just sending  
14 certain proposals -- they just say, "No thank you very  
15 much, we don't -- and then who is left, one company  
16 may be left and they have to take all this. That is  
17 where the danger comes in. That has to be stopped by  
18 allocation. (Rest inaudible)

19 MR. SEDGWICK: I'm not sure of that.  
20 I'm a member of the Committee on Legislation which  
21 considered the matter -- I think an attempt is going  
22 to be made to meet this admitted evil of the sale by  
23 the senior mortgagee without any notice to the junior.  
24 I think if you can compel to notify everyone who is on  
25 the title and give them reasonable notice -- it is, of  
26 course true, that if you give the second mortgagee too  
27 long a period in which to redeem you are going to make  
28 it more difficult to get (rest inaudible)

29 MR. BENDER: There should be two  
30 different periods. The one period for putting the

1 mortgage into good standing -- that's all that the  
2 bona fide mortgagor is interested in, unless he wants  
3 to collect his bonus a little faster -- and the second  
4 period is to pay off the old (inaudible). But there is  
5 only one month for both.

6 MR. SEDGWICK: Yes, I think there is.  
7 It is hoped that there will come some acceptable formula  
8 which will apply to all mortgages whether they now  
9 contain it or not.

10 MR. BENDER: What people don't get  
11 away with. They take the Bailiff -- they go a strictly  
12 legitimate way -- the Bailiff puts it in the paper with  
13 sealed -- nobody knows that the bid should be sealed --  
14 so mostly those sales, auction sales we call it, are  
15 aborted because nobody comes (rest inaudible). So they  
16 are mostly aborted. And after they became aborted then  
17 there is reselling so the mortgagee can sell it at any  
18 reasonable price -- and you can argue about what a  
19 reasonable price is, because the price is composed of  
20 down payments, you can say a reasonable price is \$5,000  
21 cash or \$10,000 (next few words inaudible) -- what is  
22 a reasonable price? So he sells it for \$5,000 cash. And  
23 the mortgage is wiped out. This is one of the things  
24 which -- you see, people have not a lot of money. There  
25 are a lot more schoolhouses than there were ten years  
26 ago and now my clients come and want first mortgages --  
27 the same characters who wouldn't have looked at the  
28 place ten years ago. And that affects the interest  
29 rates for second mortgages, so we have to open the  
30 market.

1 THE CHAIRMAN: Mr. Bukator, do you  
2 have any questions?

3 MR. BUKATOR: We might have to keep  
4 Mr. Bender here til midnight, I think. One of the many  
5 thoughts that went through my mind, Mr. Bender, I too  
6 am in the real estate business, and I know of similar  
7 deals to the one which you describe here. I'll give  
8 you one of the last ones which came to my attention. A  
9 man borrowed \$4,500 for 2 years and he signed a second  
10 mortgage for \$6,000 and paid it off in two \$3,000 payments  
11 in two years time at 7%. Now, right off the bat it was  
12 ordered for six and totalled for ten, which made it  
13 40% right off the top, not calculating interest. I  
14 realize everybody has earned their money, I'll go along  
15 with your reasoning there, --

16 MR. BENDER: That can also be overcome.  
17 I don't know -- maybe this comes under the legislature  
18 of the Province -- certain clauses in case of bonus  
19 mortgages whereby the mortgagor should be entitled to  
20 pay off at any time at the same proportion the borrower  
21 is being paid for. (Rest of statement inaudible)  
22 German immigrants, for instance, hate mortgages. I don't  
23 know how they did it, they paid off mortgages entire --  
24 you wouldn't believe where they got the money from --  
25 those poor people should have had the privilege, should  
26 have had the advantages of those premature payments by  
27 giving the same bonus back which was (rest inaudible).  
28 There is one thing for which the legislature should do  
29 a good job, which I mentioned in the brief, is the  
30 misrepresentations.

1 MR. SEDGWICK: I suggest to you that  
2 that comes under the criminal code.

3 MR. BENDER: Well, it may come under  
4 the criminal code -- we had cases and we went to the  
5 Detective Sargeant -- do you think the Detective Sargeant  
6 knows anything about bonus mortgages? He was lost, he  
7 didn't know how to tackle the thing and didn't even go  
8 (rest inaudible). I think it just should be like the  
9 sale of any other security because we have a lot of  
10 small investors, old widows who like to buy second  
11 mortgages -- they should know what they are buying.  
12 This can be done.

13 MR. BUKATOR: Mr. Bender, in your brief  
14 you mentioned two or three ways to handle this problem.  
15 I like that phrase of yours about this genius idea of  
16 yours some seven years ago, that N.H.A. money for older  
17 homes. I never met you before but I mentioned it in  
18 the House two or three years ago. I could see where  
19 people could get their money out of their old homes  
20 through an N.H.A. loan, pay it off in full and then go  
21 buy the home that they would like to live in after many  
22 years of having their own home paid off. It would be  
23 quite a boom to the building business. I don't know  
24 where the thought originated, but it's a good one. We  
25 are crossing lines -- as you say we are in the federal  
26 field now --

27 MR. SEDGWICK: The N.H.A. is a federal  
28 field --

29 MR. BUKATOR: Since we have touched  
30 on that a little bit, I might say that the V.L.A. for

1 which it was originally set up for, to assist the  
2 Veterans, I think they have just given a few people  
3 a lot of good jobs -- I think that these people with  
4 V.L.A. money, at least who applied for V.L.A. money at  
5 a low rate of interest, some of them are still waiting  
6 and have been waiting for months to complete a deal.  
7 They could have gone to war and come back again and  
8 the transaction would not be finished. I hope that  
9 your thinking is not along that line. You say better  
10 mortgage money in the bank; I suggest that the govern-  
11 ment go into the second mortgage business to help these  
12 people, and get away from these loan sharks.

13 MR. BENDER: Well, N.H.A., you see --

14 MR. BUKATOR: Just to make this one  
15 point, Mr. Bender. We have touched on everything but --  
16 you have gone to other countries and have picked up  
17 money to invest in Canada. To the best of your knowledge  
18 what are the best yields that some of your customers  
19 have got? From investing their money here -- and I  
20 realize it is not against the law --

21 MR. BENDER: They received, I told you,  
22 they received the first three or four years 15% of  
23 their net (next part inaudible) -- and that was all  
24 done in my office. They got 15% and then down to 12, 10  
25 -- we have a reducing rate -- but it was still more than  
26 some cases of bona fide mortgage credit at 15. 12% is  
27 still a very high rate but it is obviously considered  
28 very acceptable today and I still think it shouldn't be  
29 12% in all cases.

30 MR. BUKATOR: Well, then this was just

1 a case you picked out of the air?

2 MR. BENDER: Oh, I just made it up, but  
3 this is a very conservative one.

4 MR. BUKATOR: I was going to say, these  
5 have not gone through your office, similar --

6 MR. BENDER: Surely.

7 MR. BUKATOR: You have had many deals  
8 similar to this?

9 MR. BENDER: Certain amount of mortgages  
10 where -- the only thing I didn't buy second bonus  
11 mortgages of the first mortgage -- I wasn't foolish  
12 enough to do that. I bought second of the conventional  
13 because I knew the price would be less to trade it, so  
14 this can be varied according to the (rest inaudible).

15 MR. BUKATOR: Percentagewise, what would  
16 the investor get out of a deal like this?

17 MR. BENDER: Today?

18 MR. BUKATOR: Yes, out of a deal similar  
19 to this?

20 MR. BENDER: Today he would get -- today  
21 he would get one-third less than he got seven years ago,  
22 but this is the situation we are at the mercy of private  
23 capital. We can't force private capital (rest inaudible)  
24 --fear of inflation, chances to make a fast dollar in  
25 the stock market, other enterprises can pull out all  
26 the private money. This is a very unusual situation in  
27 Canada where private mortgage funds go directly into  
28 homes. It wasn't there 20 years ago, it was all done by  
29 trust companies and the owner could make the mortgage at  
30 a legitimate rate. And he didn't sell it, he kept it.

1 MR. BUKATOR: Well, since we are on  
2 mortgages I might emphasize again, Mr. Chairman, that  
3 the government or the banks should go into second  
4 mortgages by all means, and N.H.A. loans on old homes  
5 would clear quite a problem up. A man in a low income  
6 bracket would come to me and buy a home for himself.  
7 I have no other questions.

8 THE CHAIRMAN: Mr. Reilly, do you have  
9 anything to add?

10 MR. REILLY: No.

11 THE CHAIRMAN: Mr. Irwin?

12 MR. IRWIN: Mr. Chairman and Mr. Bender,  
13 a matter which has interested me in this whole question  
14 since we began sitting in this Committee, is the  
15 possibility of creating a new mortgage market -- you  
16 mention it on page 5 -- is there any good reason why,  
17 let us say for example, the Mortgage Brokers Association  
18 might not create a mortgage market operating --

19 MR. BENDER: I thought of that -- by  
20 the way, before I answer your question, I haven't found  
21 yet any tariff for mortgage broker rates -- I think  
22 the law has not established any terms for brokerage  
23 business. I thought of having it equivalent to the  
24 so-called Co-op listings, Co-op listings not only of  
25 houses but Co-op listings of mortgages reaching a bigger  
26 market. This is a very tough problem because of the  
27 time limit involved. A man wants to get rid of his  
28 mortgage very fast. By the time he takes it down to some  
29 exchange there is too much (next words inaudible). But  
30 it could be feasible.

1 MR. IRWIN: Well, I haven't thought  
2 about this deeply at all, just some random thoughts on  
3 the matter. Would it be possible to grade mortgages  
4 like you might eggs? They could be brought to a  
5 central mortgage market, graded as A,B,C or D, and there  
6 would be established, every day perhaps, a going rate  
7 for those different grades of securities? I would think  
8 the mechanics could be worked out. It might be  
9 difficult to do so, but I guess the mechanics of every  
10 market since early times have been difficult to work  
11 out in the beginning, but if we could somehow arrive  
12 at this grading and the mechanics of the thing of  
13 establishing a market, one would think that this would  
14 automatically take care of the emergency that you  
15 mentioned as being a difficulty. A person, if there  
16 were a market established, one would think one could  
17 conceive the need for disposing of a mortgage in the  
18 morning and have it by eleven o'clock the same morning.

19 MR. BENDER: If you have small affidavits  
20 attached to each mortgage, signed and sworn by a  
21 solicitor, the purchaser and the vendor that this was  
22 a true conduct of the transaction, maybe you can make  
23 them respectable, but this is a first step because I  
24 don't believe anymore any down payment anybody tells me  
25 because I know from reselling older houses that we are  
26 selling them a scandalous down. I don't believe (rest  
27 of sentence inaudible). And you can't catch it by a  
28 criminal code because there is actually a dummy, you  
29 will see the transfer is made was \$1300 to a dummy, even  
30 the lawyer doesn't know. You see, the person received

1 the deposit of the whole amount of down payment. He  
2 keeps it. And there is no connection between the real  
3 estate broker and the mortgage broker -- that's another  
4 thing I pointed out in the matter of insurance -- that  
5 any real estate broker should be a mortgage broker  
6 and any mortgage broker should be a real estate broker  
7 and be subduded to the same Brokers Act, not the Mortgage  
8 Brokers Act, the Real Estate Act, having to give complete  
9 accounting. And there are more commissions made, even  
10 by the same real estate broker acted as mortgage broker  
11 made in selling the mortgages than real estate. But if we  
12 can have a complete full picture of each transaction,  
13 then we can have a market, otherwise nobody would believe.

14 MR. IRWIN: Thank you, Mr. Bender.

15 MR. BELANGER: I was rather surprised  
16 to read, on page 4 of your brief, I am wondering whether  
17 this is a very common practice. You say, "The real  
18 danger for the second mortgagee lies, however, in Power  
19 of Sale Proceedings by the first mortgagee in which case  
20 no notice has to be given to the second mortgagee and  
21 the property can be sold at any reasonable price without  
22 the knowledge of the second mortgagee. It is obvious  
23 that such lack of legal protection is sufficient reason  
24 for any conscientious lawyer to advise his client  
25 against such investments". Is that a common practice?  
26 The second mortgagee not being advised at all?

27 MR. BENDER: It is a common practice.  
28 After two months, after eight weeks even the owner doesn't  
29 have to be notified. The mortgages can be bought up  
30 in two months and nobody has to be notified, not even the

1 owner. After ten days all that you have to do to  
2 conform to the law is put a little notice on the house  
3 door. You can't expect the mortgagee to run around  
4 looking (next few words inaudible). But even if he  
5 was given notice after four weeks, you see -- you can  
6 bear me out but I don't think he has the right to put  
7 the mortgage in good standing. He has only right to  
8 pay off the capital.

9 MR. SEDGWICK: There is the right of  
10 redemption.

11 MR. BENDER: That is the difference  
12 between foreclosure and the policy of -- how the policy  
13 applies to law, I don't know. But at least he has a  
14 release in foreclosure, he can take his time, he's got  
15 ten days to pay off the arrears or six months to  
16 pay off the whole amount. Even if the new law will  
17 change things and give him notice of four weeks, he  
18 still won't have the relief of six months detention,  
19 which would put it in the same footing as a foreclosure.  
20 If you know the business you will come across the most  
21 ingenious schemes to close the policy out. The first  
22 mortgagee will get together with the mortgagor and say,  
23 "Listen, you haven't got anything in your property  
24 anyway, you have no equity. I'll give you \$100 to  
25 move out". And he needs vacant possession to sell --  
26 nobody will buy a place with somebody living in it  
27 because it's a very complicated procedure to get somebody  
28 out and the landlords can't act (rest of sentence  
29 inaudible). At any rate he makes a deal to get him  
30 out, the house is empty, it's ready for (inaudible).

1 The mortgagor has got his \$100 or \$50 and the first  
2 mortgage is (rest of sentence inaudible). He needs  
3 vacant possession. The whole business has deteriorated  
4 to such an extent that the second mortgage is not any  
5 more either respectable or it's full of mistrust and  
6 that is a very poor situation.

7 THE CHAIRMAN: Mr. Sandercock?

8 MR. SANDERCOCK: Mr. Chairman, I was  
9 interested to learn that some of the insurance companies  
10 are withdrawing from insuring properties that weren't  
11 good risks. I never heard tell of that before. It's  
12 something new to me. I know that we have fire prevention  
13 weeks and the firemen make periodical checks of premises  
14 to check the wires and rubbish left around. Apparently --  
15 it's something new to me, I didn't know it existed.

16 MR. BENDER: Well maybe in smaller --  
17 I don't know -- it's easier (next part inaudible) --  
18 than in a smaller place where everybody knows everybody.

19 MR. BUKATOR: They do it in smaller  
20 places too. They will come into an establishment such  
21 as a restaurant, the inspectors for the insurance  
22 company, and they will look over the suction band around  
23 the kitchen and see there is grease hanging on to it and  
24 they go down to the cellar and find that some of the  
25 circuits are overloaded. They are going to be very  
26 fair with you, some of these insurance companies, they  
27 will give you 30 days in which to clean that mess up.  
28 And if you don't -- well, I'm not saying if it's right  
29 or wrong -- I'm just telling you how they go about it.  
30 If you don't clear these situations up in a month's time,

1 then they cancel your insurance. And if they cancel  
2 your insurance you can't get it from somebody else.  
3 You're out of luck. Now this happens in --

4 MR. BENDER: I went into those houses  
5 -- I thought something must be wrong. I looked over the  
6 wiring, I looked over basements (next part inaudible).  
7 They are looking at the maturity date of the policy now  
8 and whether those policies are located in any districts  
9 which might have some stigma. Then they send their  
10 young boys out for \$50 a week and they have to cover a  
11 lot of territory and they hand in their reports. (Next  
12 sentence inaudible).

13 MR. REILLY: Mr. Chairman, I wonder if  
14 Mr. Bender would like to tell us whether along these  
15 cancellations, whether there are any brick homes in  
16 the City of Toronto that had cancellations?

17 MR. BENDER: Yes, brick ones.

18 MR. REILLY: Brick ones?

19 MR. BENDER: 24 Colgate -- if you want  
20 to have others I give you first full -- George Street,  
21 a house, brick house (next part inaudible)-- but there is  
22 no more fire hazard in a non-brick home, that's a  
23 wrong conception, but fire most starts in the (inaudible)

24 MR. REILLY: Except that in the City  
25 of Toronto you can't get permission to build a frame  
26 home, it's against the by-laws.

27 MR. BENDER: No, we are talking about  
28 existing frame homes and there are plenty of them and  
29 those people are punished by insurance and by mortgage  
30 credit. The man who wants to live frugally and not in

1 the glamorous bungalow where he can bury himself for  
2 35 years and I want you to project your thinking --  
3 the next 25 years a large segment of people have to  
4 pay the same amount every month regardless of whether  
5 their mortgage is 10 or 4 or 3, unless they want to  
6 pay for another 15 years longer, with reference to  
7 the economy, to the consumer credit, to the consumer  
8 (next words inaudible) -- it's a large segment of people  
9 are completely preoccupied with the same annuity. Those  
10 people want to live in a modest home, and they are very  
11 nice people, they keep their house very beautiful, are  
12 penalized by mortgage and insurance.

13 MR. REILLY: Mr. Bender, is it not true  
14 that the majority of cancellations is on homes of older  
15 homes and of frame homes?

16 MR. BENDER: Well I would say that  
17 they are along the middle class or the lower priced  
18 homes. But this doesn't make justice out of injustice.

19 MR. REILLY: No, but it is a fact.  
20 With your experience, Mr. Bender, how common is this  
21 practice of title insurance now?

22 MR. BENDER: It's not very common at  
23 all. There are a few companies who have a solicitor  
24 who (rest inaudible).

25 MR. REILLY: So one of your recommenda-  
26 tions is that it would be transferred (rest inaudible)

27 MR. BENDER: If title insurance would  
28 be common -- I don't want to be curt to solicitors  
29 because it would take away this source of income -- but  
30 if title insurance would become more popular it only

1 would make sense that it should be transferred. When  
2 you think that one little property has been searched  
3 over and over by 20 different lawyers --

4 MR. REILLY: But he doesn't carry it  
5 over (rest inaudible)

6 MR. BENDER: Well it should be --

7 MR. REILLY: He's responsible.

8 MR. BENDER: He's responsible, yes.  
9 Sometimes they don't check it all over, but that's  
10 their tough luck. (Next sentence inaudible)

11 MR. REILLY: Well it's strange when  
12 you were telling us that you invested money for --  
13 Swedish capital -- and you had 15% return and then  
14 you learn of these human hardships of which you have  
15 been --

16 MR. BENDER: You see, as I pointed  
17 out in this brief, in the beginning everything was  
18 hunky-dory you see. Every immigrant not only made  
19 money but he housed other immigrants who paid him \$10  
20 per room and the house was packed and that is how they  
21 paid it off so fast. (Next sentence inaudible) But  
22 then came the ones who were unemployed or they were  
23 sick or their wife was pregnant -- you know --

24 MR. REILLY: You don't have foreign  
25 capital invested now?

26 MR. BENDER: Well, I'm selling out --  
27 very few (Laughter). I'm buying now the apartment  
28 buildings -- that's what we do now. But I don't feel  
29 sorry for apartment owners because they had to take that  
30 gamble when they bought it. But I feel sorry for men --

1 MR. REILLY: The same thing is still  
2 there, a small or a large investor.

3 MR. BENDER: The principle is the same  
4 only it's somebody who knows what he is doing or thinks  
5 he knows what he is doing. People ask me, "Why do  
6 you try to kill the goose that lays the golden egg" --  
7 maybe some of you may ask me that. I've lived through  
8 two revolutions, through financial corruptions and  
9 social developments and I have been 15 years doing  
10 real estate in the Old Country and 22 years here,  
11 since Hitler and I decided to depart from each other.  
12 And unlike you lucky born Canadians who haven't been  
13 through those things I know that any profits made from  
14 an unhealthy, nonsensical, stupid situation (rest of  
15 statement inaudible). Mortgage credit is a field  
16 where everybody (rest inaudible)

17 MR. REILLY: It's a temporary advantage  
18 now.

19 MR. BENDER: Yes. But it's not an  
20 advantage. (Rest of statement inaudible).

21 THE CHAIRMAN: Mr. Letherby, have  
22 you any questions? No further questions?

23 Well, thank you very much, Mr. Bender.  
24 Gentlemen, this meeting is adjourned. We meet tomorrow  
25 morning at -- tomorrow afternoon at 2:00 o'clock in  
26 Room number 2

27 ---MEETING ADJOURNED UNTIL 2:00 P.M. NOVEMBER 19, 1963.
